

BETÜL GÜLEÇ

Computer Engineer / Mobile App Developer

Mail : betulgulecofficial@gmail.com | **Location** : Gaziosmanpaşa / İstanbul | **Phone** :+90 554 004 24 01
Date of Birth : 25/05/2002 | linkedin.com/in/betulgulec | github.com/bbetulgulec

ABOUT

I am a Computer Engineering graduate and an experienced software developer specializing in mobile app development using **Flutter** and **Kotlin**. I work with technologies such as **Java**, **React Native**, **Firebase**, **RESTful APIs**, and **Node.js**. I have experience in application deployment and cloud infrastructure processes, including integration with **AWS-based backend**s. I focus on scalable software architectures, **API integrations**, and sustainable code development.

EXPERIENCE

Neon Apps - *Mobile App Developer* *12/2025 - 07/2026*

- **Mobile App Development:** I developed mobile app features using Flutter and Dart; I created sustainable, modular, and performance-focused code structures based on the BLoC architecture and Clean Code principles.
- **Mobile Architecture and Technical Research:** I analyzed the BLoC and Riverpod state management approaches to improve the app's architecture; I evaluated solutions tailored to technical requirements.
- **Technical Leadership and Team Coordination:** I facilitated coordination among the design, mobile, and backend teams, leading project kickoff meetings, technical planning sessions, and brainstorming sessions.
- **Backend and Cloud Integration:** I collaborated with the full-stack team on technical evaluations related to AWS infrastructure, RESTful API communication, and mobile-to-backend data flow.
- **Code Quality and Internal Knowledge Sharing:** I led repository analysis sessions, contributing to code reviews, the sharing of technical knowledge, and the improvement of software development standards.

Galaksity Akıllı Şehir Teknolojiler A.Ş. *06 /2025 - 08/2025*

Mobile App Developer Intern

- **Backend Development and RESTful API: I** worked on developing RESTful APIs, database operations, and backend service integrations using Node.js, Express.js, and Sequelize.
- **API Testing and Validation:** I performed API endpoint testing, HTTP requests, and response validation using Postman.
- **Agile and Teamwork:** As part of Agile/Scrum processes, I collaborated with mobile and backend teams by participating in sprint meetings, task planning, and feature development processes.

Eyüp Sultan Municipality - *Mobile App Developer Intern* *06/2024 - 08/2024*

- **Mobile App Development:** I contributed to the development of a mobile app for municipalities using Flutter; I developed user-centric interfaces and new app features.
- **Real-Time Systems:** I developed real-time data synchronization, alerts, and emergency notification mechanisms using the Firebase Realtime Database.
- **Backend and Database Integration:** I facilitated data communication between the mobile app and the backend through integrations with Firebase Authentication, MongoDB, and RESTful APIs.
- **Software Architecture and Performance:** I applied principles of sustainable code structure, modular development, and performance optimization.

Düzce University PASS Community - *R&D Director* *09/2022 - 06/2023*

- **Leadership and Team Coordination:** As part of the Teknofest preparations, managed cross-functional teams within the PASS community by organizing technical planning processes and coordinating joint project workflows.
- **Technical Research and Project Development:** Contributed to R&D-focused activities by supporting software development processes, resolving technical issues, and facilitating innovation-driven project work throughout the competition preparation process.

MY PROJECTS

- **AI Health Scan App (2025):** A mobile app that performs health screenings using AI-powered image analysis
  Technologies Used: Flutter, Vertex AI, Firebase, Clean Architecture
- **Social Media App (2025):** A mobile social media app featuring identity verification, data storage, and push notifications.
  Technologies Used: Flutter, Cubit, Clean Architecture, Firebase Authentication, Firestore, FCM, Local Notifications
- **SimAI Mobile App (2025):** An eSIM app I developed at NeonApps. It integrates with the backend and dynamically manages data.
  Technologies Used: Flutter, Dio, Firebase, Swagger
- **Connect-Four (2025):** A mobile game with an AI opponent; the App Store release process was completed, and the app was published.
  Technologies Used: Flutter, Flame, AI Algorithm
- **Emotion Analysis Music App (2025):** A CNN model that predicts emotions from music and a FastAPI service that delivers this to a mobile app.
  Technologies Used: CNN, FastAPI, log-mel spectrogram, transfer learning, Java, XML
- **Brain Tumor Detection and Classification (2025):** A model that detects and classifies brain tumors from medical images using a CNN architecture.
  Technologies Used: CNN, MATLAB

SKILLS

- **Backend**: Java Core, Android Java, Flutter , Kotlin, React
- **Frontend**: JSP, React Native, XML, Flutter, Jetpack Compose
- **Databases**: Firebase Realtime, Firebase Storage, Firebase Authentication ,MySQL, SQL Server, SQLite, MSSQL,Redis
- **Design Patterns:** MVC, MVVM, Clean Architecture, Onion Architecture
- **Others** :REST API, JUnit, log4j, Yerel Sunucu Kurulumu, Veri Tabını Tasarımı, VeriTabanı Analizi, ML,CNN, R-CNN, Matlab
- **Tools**: Kaggle ,Android Studio, VS Code, MATLAB, Docker, IntelliJ IDEA, WebStorm, Git, GitHub,Rider

EDUCATION

Düzce University (2020-2025) Computer Engineering GPA : 3.12

English Level - B1/B2

CERTIFICATES

Version Control: Git and GitHub

MATLAB Onramp

MATLAB Machine Learning Onramp

MATLAB Deep Learning Onramp

MATLAB Image Processing Onramp
