

BETÜL GÜLEÇ

Computer Engineer / .NET Developer

Mail : betulgulecofficial@gmail.com | **Location** : Gaziosmanpaşa / İstanbul | **Phone** :+90 554 004 24 01
Date of Birth : 25/05/2002 | linkedin.com/in/betulgulec | github.com/bbetulgulec

HAKKIMDA

I am a Computer Engineering graduate and a software developer who builds backend and web applications using **.NET**. I develop scalable, secure, and deployable systems using a **microservices architecture**; I use **Docker**, **Redis**, **Ocelot API Gateway**, and **IdentityServer**. I have gained experience in cloud-based application and infrastructure processes using **AWS services.** In addition to my .NET microservices project, I am working on a web project developed with **Java and Spring MVC**, focusing on clean code, **API integrations**, and secure authentication.

DENEYİM

Düzce University PASS Community - *R&D Director* *09/2022 - 06/2023*

- **Leadership and Team Coordination:** As part of the Teknofest preparations, managed cross-functional teams within the PASS community by organizing technical planning processes and coordinating joint project workflows.
- **Technical Research and Project Development:** Contributed to R&D-focused activities by supporting software development processes, resolving technical issues, and facilitating innovation-driven project work throughout the competition preparation process.

Freelance *06/2026 - Present*

Mevsim Manav | Microservice-Based E-Commerce Application

- **Microservice Architecture and Backend Development:** I developed an e-commerce application using ASP.NET Core. I structured the services according to the Onion Architecture approach; I organized command and query operations within the application using CQRS and MediatR.
- **API Security and Service Communication:** I configured service routing using Ocelot API Gateway. I worked on cross-service authorization processes using IdentityServer and JWT-based authentication, the Client Credentials flow, and a token handler.
- **Messaging and Real-Time Features:** I developed cross-service messaging with RabbitMQ and real-time communication features with SignalR. I used Redis for caching needs.
- **Database and Deployment:** I worked with PostgreSQL and SQL Server; I packaged application services using Docker containers. I worked with cloud environments and deployment processes on AWS EC2.
- **CI/CD and Deployment:** I created a CI/CD workflow using GitHub Actions. By automating the compilation of the application and the creation of Docker images—triggered by changes in the code repository—I contributed to the deployment and release process to the AWS environment.
- **Additional Features: I added multilingual support (localization) to the application.**
- **Link:** https://www.mevsimmanav.com.tr/

MY PROJECTS

- **Library Automation System:** A web-based library application we developed as a team using Spring Web MVC, where users can browse books, add them to their favorites, and check them out. I worked on the integration of an external book API, the admin panel, and database operations.

  Technologies Used: Java, Spring Web MVC, REST API, MSSQL, JDBC, Docker, JUnit, Log4j
- **Emotion Analysis Music Application (2025):** A CNN model that predicts emotions from music and a FastAPI service that delivers this functionality to a mobile app.

  Technologies Used: CNN, FastAPI, log-mel spectrogram, transfer learning, Java, XML
- **Brain Tumor Detection and Classification (2025):** A model that detects and classifies brain tumors from medical images using a CNN architecture.

  Technologies Used: CNN, MATLAB

SKILLS

- **Backend:** C#, .NET, ASP.NET Core, ASP.NET Core MVC, RESTful API, Java, Spring Web MVC
- **Frontend:** HTML, CSS, JavaScript, JSP, XML,React
- **Databases:** SQL Server, MSSQL, PostgreSQL, MySQL, Redis, SQLite,Redis,Firebase
- **Design Patterns:** Microservices, Onion Architecture, Clean Architecture, MVC, CQRS, MediatR
- **Authentication and Communication:** Duende IdentityServer, JWT, Client Credentials Flow, Ocelot API Gateway, RabbitMQ, SignalR
- **Testing and Logging:** JUnit, Log4j
- **Cloud and AWS:** Amazon EC2, Amazon S3, Amazon VPC, AWS IAM, Amazon CloudFront, Docker
- **CI/CD ve DevOps:** GitHub Actions, CI/CD, otomatik derleme ve dağıtım
- **Others**: REST API,Yerel Sunucu Kurulumu, Veri Tabını Tasarımı, VeriTabanı Analizi, ML,CNN, R-CNN, Matlab
- **Tools**: Kaggle ,Android Studio, VS Code, MATLAB, Docker, IntelliJ IDEA, WebStorm, Git, GitHub,Rider

EDUCATION

Düzce University (2020-2025) Computer Engineering GPA : 3.12

English Proficiency Level - B1/B2

CERTIFICATES

Version Control: Git and GitHub

MATLAB Onramp

MATLAB Machine Learning Onramp

MATLAB Deep Learning Onramp

MATLAB Image Processing Onramp

Asp.Net Core MultiShopMikroservis E-Ticaret Kursu

C# ile Sıfırdan İlk işe

DevOps CI/CD: GitLab, GitHub Actions,Jenkins,Azure Pipelines

Entity Framework Core - A Full Tour
