## Profile

Computer Engineering graduate and Mobile Application Developer experienced in **Flutter**, **React Native**, **Kotlin**, and **Java development**. I have been actively developing mobile applications with a **strong focus on scalable architecture**, **performance**, and **user experience** while continuously improving my technical skills through real-world projects.

My experience includes **cross-platform** and native mobile development, **Firebase integrations**, **RESTful API communication**, and backend development with **Node.js** and **Express.js.** Working with different technologies has helped me develop a broader perspective when approaching technical problems and software architecture decisions.

Ratherthanfocusingonlyon writing functionalcode, I aimtobuild**maintainable**,**sustainable**, and**user-oriented** applications.I enjoy collaborating with teams, learning from experienced developers, and contributing to projects with both technical and creative thinking. Alongside mobile development, I also explore **AI/ML** technologies and modern software practices to continuously expand my knowledge.

## Professional Experience

**Neon Apps** *Mobile Developer*

Oct. 2025 – Apr. 2026 / İstanbul

-**Leadership & Cross-functional Coordination:** Led project kickoff and brainstorming sessions by aligning design, mobile, and backend teams to define technical roadmaps and ensure seamless synchronization before the development phase.

-**Mobile Architecture & State Management:** Developed performance-driven applications using Flutter, adhering to Clean Code and sustainability principles; primarily utilized BLoC architecture while actively researching and analyzing emerging solutions like Riverpod.

-**Technical Consultation & Backend Integration:** Engaged in regular technical discussions with the fullstack team regarding AWS infrastructure to optimize mobile-to-backend communication and ensure efficient data integration.

-**Collective Learning & Code Analysis:** Spearheaded team-wide "repo analysis" sessions to review high-quality codebases, fostering a culture of continuous learning and establishing industry best practices within the team.

-**Design-to-Development Collaboration:** Partnered closely with the UI/ UX design team to provide early-stage feedback on technical feasibility, streamlining the transition from design to implementation and enhancing the overall user experience.

**Eyüp Sultan Belediyesi** *Mobile Developer Intern*

June 2024 – July 2024 / İstanbul

- **Mobile Application Development & Feature Implementation:** Contributed to a municipality-focused mobile application project by taking active responsibility in the development process and implementing user-oriented mobile features using Flutter.

- **Real-time Systems & Architecture:** Developed real-time synchronization, alarm, and emergency-based functionalities while focusing on maintainable code structure, performance optimization, and scalable mobile architecture principles.

- **Backend & Database Integration:** Worked with Firebase Authentication, Firebase Realtime Database, MongoDB, and backend technologies to ensure reliable data flow and seamless mobile-to-database communication throughout the application lifecycle.

June 2025 – July 2026 / İstanbul

**Galaksity Akıllı Şehir Teknolojiler A.Ş.** *Mobile Developer Intern*

- **Backend Development & API Integration:** Built RESTful APIs using Node.js, Express.js, and Sequelize, and performed backend testing and request validation processes with Postman.

- **Agile Collaboration & Sprint Processes:** Participated in sprint meetings, feature planning, and collaborative development workflows by working closely with mobile and backend teams throughout the project lifecycle.

**Düzce University PASS Community** *R&D Director* 2022 – 2023 / Düzce

- **Leadership & Team Coordination:** Managed cross-functional teams within the PASS community by organizing technical planning processes and coordinating collaborative project workflows for Teknofest preparations.

- **Technical Research & Project Development:** Contributed to R&D-focused activities by supporting software development processes, technical problem-solving, and innovation-driven project studies throughout the competition preparation period.

## Projects

- **CalorieMeter Mobile App (2023)** – Android Studio, Java, XML, Firebase Realtime Database, Authentication.
- **Smart Library Website (2025)** – MSSQL, JDBC-based data management, Docker,Log4j logging, JUnit tests.
- **Brain Tumor Detection and Classification (2025)** –CNN architecture,MATLAB,
- **Emotion Analysis Music Application with CNN Architecture (2025, Graduation Thesis)** – FastAPI , log-mel spektrogram Analysis, transfer learning , Java, XML
- **Social Media App(2025)** - Flutter, Clean Architecture, Local Notification, Firebase Authantication, Firebase Firestore, FCM, Cubit
- **SimAI Mobile Application (2025)** – Flutter, Dio, Firebase, Backend Integration, Dynamic Data Management.
- **AI Health Scan Application (2025)** – Flutter, Vertex AI, Firebase, AI-powered Image Analysis, Clean Architecture.

## Soft Skills

- **Mobile Development:** Flutter, React Native, Android Native, Java, Kotlin, XML, Jetpack Compose
- **Backend & API:** Java Core, REST API, Backend Integration, Dio Network Manager
- **Database & Cloud:** Firebase Realtime Database, Firebase Authentication, Firebase Storage, MySQL, MSSQL, SQL Server, SQLite, FCM, Supabase
- **Architecture & Patterns:** Clean Architecture, MVC, MVVM, State Management,MCP
- **AI & Machine Learning:** Machine Learning (ML), CNN, R-CNN, MATLAB, Kaggle,
- **Tools & Technologies:** Android Studio, VS Code, IntelliJ IDEA ,WebStorm, Docker, Git, GitHub, Cursor
- **Additional Knowledge:** Database Design, Database Analysis, Local Server Setup, Cross-platform Mobile Development

## Certificates

- Version Control: Git and Github
- MATLAB Onramp
- MATLAB Image Processing Onramp
- MATLAB Machine Learning Onramp
- MATLAB Deep Learning Onramp
